Nagarjuna – Organic Thinking with Notes from AD 40 – AD 300 – Selections

By Nagarjuna

I. Organic Sunyata – What is Buddhism

Buddhism is a religious type of metaphysical process – it argues with a logic – I comment on the world a lot, and also the future of Europe.

I mean the Christian illuminations helps – but we are metaphysical and decidedly so, according to Paul. He means we are too metaphysical and in fact the news is enough, we do not need a fully metaphysical process of speculating on forms like flowers, pots and living experiments even tricks and joys of learning and ascetism afterall which is so dedicated to Nirvana. We can choose common bourgeois life instead. It is better than this difficult path to Nirvana which is actually our point on Paul – he demeans the meaning of life and existence – we are logicians – dependent origination is not a science – I prove it is.

II. Notes on Logic

Negation which is simply to negate – which means if I am affected by illness, I negate that – why is it happening – because of someone – I also negate that and get a joke – it is because of the way Nanano is walking and talking which led to the incident that I negate here – I was walking with him in some randomness.
